Address

# Trust Estate Management and Premises Maintenance Policy

## Policy Statement

All school premises require a regular maintenance and estate management if they are to be kept in good repair and operate well. Without maintenance, the quality of school buildings will rapidly decline and frequent breakdowns will occur.

## The Aims of the Policy

This policy aims to ensure that the school's buildings and grounds are kept in a safe and well-maintained condition at all times so that they are suitable for educational purposes and offer the best possible environment for pupils and staff to ensure that:

- a. all buildings, fabrics, fittings, plant, utilities and equipment are kept in good, safe condition, in efficient working order and in good repair
- b. services such as water, lighting, heating and air conditioning are maintained appropriately to ensure that premises are comfortable, economical and safe to use and that energy is not wasted.

## Procedure

### Responsibilities

The condition of the premises and the management of the grounds and premises will be constantly monitored by Catholic Senior Executive Lead, Head teacher, Sites Committee of the governing body to ensure that:

- repairs and improvements are managed effectively and promptly
- security and safety policies are prepared, monitored and reviewed
- premises risk assessments are prepared, reviewed and acted upon
- an up-to-date maintenance and school improvement plan is in place
- the accessibility plan is regularly reviewed.

Responsibility for the school premises is delegated to the Head teacher who manages this function through the Trust Estate Management and Facilities.

The operational responsibilities for buildings maintenance systems lie with the Estate Management and Facilities department.

These responsibilities may be delegated and include ensuring that a programme of routine maintenance and renewal of the fabric and decoration of the premises is in place and that records are kept of all maintenance activity.

Estate Management and Facilities uses I am Compliant to record all maintenance activities including the reports and inspection certificates.

## Maintenance System

These procedures will be followed:

1. A system – I AM compliant will be used to record planned preventative maintenance, involving the inspection and assessment of equipment, plant and buildings on a regular basis.
2. I AM compliant system will be used to track faults and repairs, whereby schools will be encouraged to report faults or potential problem areas, such as torn or frayed carpets, damaged flooring, broken windows, electrical faults and broken paving.
3. Faults or repairs will be logged by the School Business Manager/Premises staff, who will conduct a risk assessment on each one to determine whether or not the repair is urgent.
4. School Business Manager may refer to Trust Estate Management and Facilities for advice or guidance on compliance.
5. One off jobs (repairs) will be allocated to, or commissioned from, appropriate staff or contractors and Estate Management and facilities will follow up to check that any necessary work has been completed satisfactorily.
6. All maintenance work, including minor tasks, will be subject to a prior risk assessment, and adequate risk management and safety arrangements will be put in place before the work is carried out.
7. All maintenance contractors will be expected to comply with our health and safety policies and safeguards.
8. Urgent repairs will be prioritised and completed as soon as is practicable. Where there is a delay in any essential maintenance work, the site supervisor/SBM will take whatever action is necessary to ensure safety and control any risk in the meantime.
9. Access to any relevant risk assessments, drawings, instructions, handbooks and records will be provided to maintenance staff or contractors by the appropriate staff.

The maintenance system will cover all compliance of the premises including:

- a. all buildings — both external and internal parts of buildings and outbuildings
- b. equipment and devices
- c. services such as water, gas and electricity
- d. grounds — including fences, gates, paths, car parks, lighting and walls.

All material parts of the premises, including fixtures and fittings, will be well maintained and a maintenance schedule will be in place in accordance with the Workplace (Health, Safety and Welfare) Regulations 1992.

### Maintenance

The Estate Management and facilities department keep and update a maintenance using IAM compliant software and will specify intervals between:

- a. routine, general and detailed inspections listed below:

Source	Section	Ref	Area	Requirement	Statutory or recommended	Frequency	School owner
GOV GEM tracker	Building structure and fabric	6	<a href="#">Asbestos</a>	Review of asbestos register and management plan	Statutory	Annual	Headteacher/Heath and safety manager
GOV GEM tracker	Building structure and fabric	5	<p>Drainage and sewerage</p> <p>Blocked drains or sewers have the potential to overflow, causing flooding and contamination of areas of the school. This can result in significant health and safety issues and affected areas will need to be immediately closed to all persons. For this reason, it is important to address any potential drain blockages as soon as they are identified.</p> <p>Gutters should be regularly cleaned. Ponding on roofs should be dealt with as a matter of urgency as it can cause deterioration of roof finishes and in severe cases can overload roofs contributing to structural failure.</p> <p>At times of severe loading (such as following storms), drains and sewers can become blocked. This also leads to flooding or contamination of areas.</p>	Periodic inspection	Recommended	Termly	Headteacher/Heath and safety manager

- b. the inspection and maintenance of each engineering service and items of special equipment
- c. the maintenance of items that require regular attention to preserve good performance (in line with the manufacturers' instructions)
- d. any other periodic work that use of an item may later show to be necessary.
- e. Reminders of any in-house inspections will be sent to the nominated staff via email by IAM complaint system.

Estate Management and Facilities will also include essential data taken from the building's records that is likely to be needed during inspections.

The schedule will include checklists completed during regular inspection which will:

- a. specify the condition of the fabric of the building, its fittings and equipment
- b. identify any repairs, remedial work or other action to be taken.

The plan will be regularly reviewed and will include routine maintenance and redecorating as well as larger-scale refurbishment.

## Emergency Repairs

A repair is usually considered to be an emergency if there is a danger to health, a risk to safety or security, or a danger of serious damage to the building.

Examples include:

- a. insecure property or failure of security systems (such as broken windows)
- b. flood/fire
- c. blocked and overflowing drains
- d. failure of water supply
- e. serious structural damage
- f. complete failure of heating system in winter

- g. complete failure of hot water system.

Emergency repairs should be dealt with immediately and appropriate action taken to ensure the safety of building occupants.

## Maintenance Staff and Contractors

All contractors working on maintenance tasks on the premises will be expected to abide by our health and safety and security policies and procedures.

When work is being planned, maintenance contractors or staff should always be provided with a site map identifying electrical and water installations and any known asbestos materials which have been left in place and sealed.

## Training

All in-house maintenance staff will be offered training to ensure that they are able to work safely and effectively. All new staff will receive induction training which will include a thorough tour of the premises and detailed guidance on fire systems and escape routes and procedures.

## Records

Records will be kept in IAM compliant for all maintenance jobs and repairs, including:

- a. when the fault or repair requirement was reported
- b. when the repair was arranged
- c. who completed the repair
- d. who checked that it was complete.

Incomplete or unsatisfactory repairs will be followed up. Maintenance records will be regularly inspected and reviewed to identify trends or patterns of work required and the performance of contractors.

## Review

This policy will be reviewed on the date below by [insert name].
